

Secure, broker, provision and monitor CAS connections

Teradici CAS Manager

Introducing Teradici CAS Manager, a unified interface for IT administrators to secure, broker, provision and monitor CAS connections. CAS Manager enables customers to install the connection management plane in their own on-premises or cloud environment, or access it as a cloud-based service from Teradici (CAS Manager as a Service). In all deployment environments, CAS Manager interacts seamlessly with CAS Connectors to access and manage remote desktops, mobile and fixed workstations.

Automate and broker CAS deployments

- Enables fast and easy deployment of new remote desktops and workstations
- Tap securely into existing Active Directory services, eliminate manual configuration tasks and improve administrative efficiency
- Facilitate secure connections between domain users and remote desktops and workstations without users having to memorize machine names or IP addresses
- Provide users access to one or many remote desktops and workstations as desired, easily modifying, adding, or removing user access as needed

Optimize costs and manage cloud consumption

- Actively control up-time service charges for public cloud remote desktops and workstations by turning off machines that are not in active use
- Start up the remote desktop or workstation when a user attempts to connect again
- Scale remote desktop and workstation resources up or down, effortlessly
- Provision remote desktops and workstations and remove them once no longer required

Secure CAS deployments

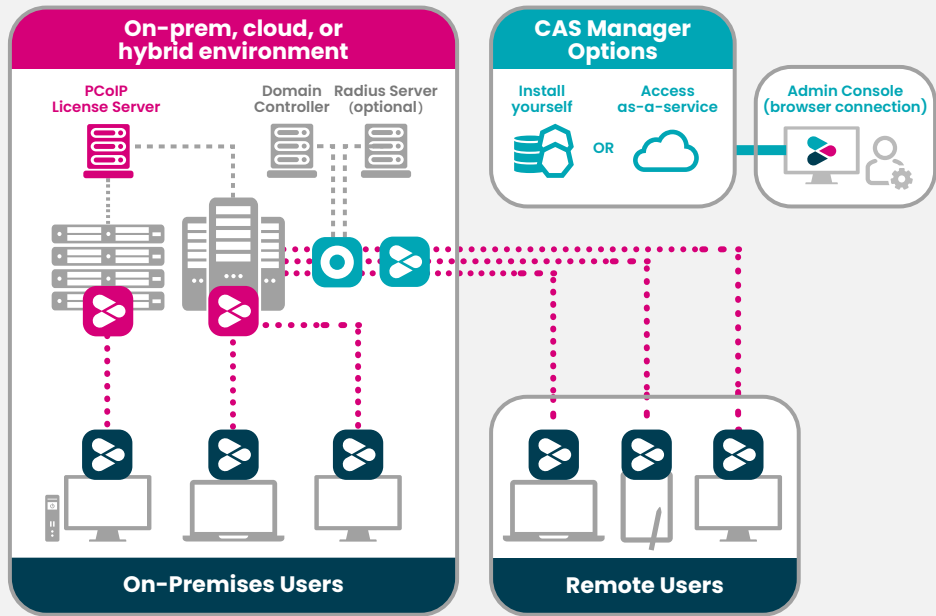

- Enable secure user entitlements by brokering PCoIP® connections
- Enable Multifactor Authentication (MFA) as an added security mechanism
- Other mainstay security features of the PCoIP protocol, such as AES-256 encryption and the PCoIP Security Gateway, always provide a secure architecture independent of MFA settings

Flexible installation options with hybrid support

- Installed in a customer's on-premises, hybrid or cloud environment, or access it as a cloudbased service from Teradici
- Multicloud support across public, private or hybrid cloud environments, including AWS, Google Cloud, Microsoft Azure and on-premises data centers

-  PCoIP[®] Agents
-  CAS Manager
-  CAS Connector
-  PCoIP[®] Clients
-  PCoIP connection

“The combination of HPE ProLiant servers and Teradici CAS can power any virtual desktop strategy. HPE customers will welcome CAS Manager’s brokering and management plane integrated with CAS to provide ultra-secure remote visualization of desktops and graphics-intensive applications.
